TMA4305 PDE 2020: Øvinger for uke 35

Et par småfeij rettet 2020-09-01

B 3.6 (a)

Burgous:

u+ uux = 0

Charddonistide hestighat

Karddenstille som stande i x= [6]

$$u = \frac{3}{a} = \frac{x}{a+t}$$

$$u(t,x) = \begin{cases} 0 & x \leq 0 \\ \frac{x}{a+t} & 0 < x < a+t \\ 1 & x > 1 \end{cases}$$

$$u(t,x) = \begin{cases} 0 & x \leq 0 \\ \frac{x}{t} & 0 < x < t \\ 1 & x \geq 1 \end{cases}$$

(6) Kerchteristikhen som stærter i }e[0,1] far higning x = 3 + t(a(1-3) + b = 3)= (1+(1-a)t) 3+at

De faller sammer nor denne perenteser or 0, dus. for $t = \frac{1}{0.1}$

X1:

$$u(o,x) = \frac{1+x_{5}}{1}$$

Karehtenististe hastighet er u², så karehtenistikhen kna x=3 her higning

$$x = 3 + t c(3), c(3) = \left(\frac{1}{1+3^2}\right)^2$$

derived $\frac{\partial x}{\partial \bar{z}} = 1 + t c'(\bar{z}) = 1 - \frac{43t}{(1+\bar{z}^2)^3}$

son a positiv for elle 3 hvis og bare hvis

43t <1 for all 3.

Det helder alltid for 3 <0; må sjeldes nor \$>0.

det gir ut < (1+32)3 for elle 3 >0

Daviver for à fine minde verdi au lepyresiden:

of (1+32)3 = 63(1+32)3 = 532-1 (1+32)2

si minimum apprés for 532=1.

Dand holder den klassiste løsninge kun for tet,

$$T = \frac{(143^2)^3}{43} = \frac{(615)^3}{4\sqrt{15}} = \frac{1}{4}(\frac{6}{5})^3\sqrt{5}$$
